

## Workbook pg. 24, 25

### Practice

**2 a i)** Silver, copper, aluminium

**ii)** Graph of how well metals conduct heat

**b** Copper is a good heat conductor, so it transfers heat from the stove quickly to the pot.

**c** Silver is much more expensive than copper, and copper is almost as good a heat conductor as silver.

**d** Copper and brass are good heat conductors, so they transfer heat away from the engine quickly to stop it overheating.
